RAGHUL LOGANATHAN

Senior Data Engineer | BI Developer

Bangalore, India | +91 9080905603 | rioraghul@gmail.com | linkedin.com/in/raghul-loganathan | sites.google.com/view/raghull

PROFESSIONAL SUMMARY

Data Engineer and BI Developer with 6+ years spanning both ends of the data stack: building ETL/streaming pipelines (SQL Server, Databricks/PySpark, Fabric, Kafka/Debezium CDC) and turning that data into decision-ready Power BI, SSRS, and Fabric dashboards for executive, sales, revenue, and operations stakeholders. Strong at owning a project from source-system integration through warehouse modeling to the final report a business user opens.

TECHNICAL SKILLS

BI & Reporting: Power BI (DAX, Power Query), SSRS, Jasper Studio, Apache Superset, paginated reports

ETL & Pipelines: SSIS, Pentaho Data Integration, Databricks Notebooks (PySpark, Spark SQL), Fabric Notebooks & Pipelines

Streaming / CDC: Kafka, Debezium, Azure Event Hub, Fabric Eventstream/Eventhouse

Data Platforms: Microsoft Fabric, Databricks, SQL Server, PostgreSQL, Snowflake, AWS Redshift, Azure Synapse

Data Modeling: Star/snowflake schema, E-R modeling, normalization, medallion lakehouse design

DevOps & Tools: GitLab, BitBucket, Jenkins, JIRA

PROFESSIONAL EXPERIENCE

Trellissoft Engineering Services Pvt. Ltd. *Sr. Data Engineer (Oct 2025 - Present) | Data Engineer (Apr 2022 - Oct 2025)*

April 2022 - Present | Bangalore, India

Promoted to Sr. Data Engineer, October 15, 2025.

Empereon-Constar — Pentaho ETL Support (April 2022 - May 2022)

- Resolved critical Pentaho ETL pipeline failures for a US calling-domain client, improving pipeline stability and cutting data delay by 60%.

GetixHealth — Healthcare SSRS/SQL Reporting (2022 - 2023)

- Developed and deployed financial and operations SSRS reports with complex SQL logic for a US healthcare client.

Internal Product Dashboard Support — RelyBill (2023)

- Built staging and reporting datasets and paginated views using stored procedures and SQL scripts to support an internal claims-analytics product dashboard.

FirstLine Road Solutions — Unified ETL Warehouse & Executive Dashboards (January 2024 - February 2025)

- Built an ETL pipeline unifying multiple source systems (Excel exports and APIs) into a single source-of-truth warehouse for a US road-assistance operations client.
- Delivered executive, revenue-monitoring, and expense-tracking Power BI dashboards, fully replacing a recurring monthly manual Excel extraction and report-building cycle.

Neil Kelly Constructions — Salesforce/Intacct Data Warehouse (March 2025 - Present)

- Built a daily automated sync (CData) from Salesforce and Sage Intacct into SQL Server, then unified the two systems (~100,000 rows/day) via SSIS into a single reporting warehouse per business logic requirements.
- Delivered executive Power BI dashboards tracking revenue, opportunity conversion, and divisional splits, including YoY and MoM historical comparisons; continue to monitor, support, and enhance the pipeline.

Internal AI-Based BI Product (March 2026 - Present)

- Supporting development and enhancement of an internal AI-based BI product (ongoing).

Black Rock Coffee Bar — Fabric Migration & Capacity Optimization (April 2026 - Present)

- Led migration of 20+ Power BI dashboards (sales, loyalty program, seasonal sales, daily order tracking) from an ADF/Databricks/ADLS-based environment onto Microsoft Fabric for a US retail coffee chain client, enabling org-wide self-service dashboard access.
- Diagnosed capacity bottleneck where semantic model refresh accounted for 66% of total Fabric Capacity Unit (CU) consumption, causing dashboard query queuing and load cancellations during peak hours.

- Redesigned the refresh architecture by offloading heavy transformations from the semantic model into Databricks and implementing incremental refresh, cutting refresh-driven CU consumption from 66% to 35% (~45% reduction in overall capacity load) and eliminating interactive query queuing.
- Built and monitored the Fabric Capacity Metrics app to track CU consumption trends and guide ongoing optimization.
- Updated upstream source data loads using Databricks notebooks with PySpark and Spark SQL.

Toyoda — Real-Time IoT Streaming Pipeline & Dashboards (April 2026 - Present)

- Designed a real-time IoT telemetry pipeline for a manufacturing client across 3 plants: enabled CDC on SQL Server via Debezium and Kafka, streamed through Azure Event Hub into Fabric Eventstream/Eventhouse, processing ~1,000 records/minute.
- Delivered low-latency (~5-minute) Power BI dashboards for machine-level fault detection, production logs, and shift-level monitoring for plant managers and executives.
- Built a parallel batch pipeline (Fabric Notebooks + Pipelines) merging streaming and batch data into a medallion-architecture lakehouse to support historical yield and production analytics.

Ivy Mobility Solutions Ltd. *Software Engineer (Feb 2021 - Apr 2022) | Intern Software Engineer (Feb 2020 - Jan 2021)*
February 2020 - April 2022 | Chennai, India

- Built ETL pipelines using Pentaho and SSIS integrating with Amazon Redshift and SQL Server for FMCG/CPG and Distribution Management System (DMS) clients across US, Mexico, Indonesia, Thailand, and Nepal (5W, Bimbo, Syngenta, SOHO, Carlsberg, Dairy Day).
- Delivered SSRS, Jasper, and Apache Superset reports for sales and operational KPI tracking; provided L2/L3 production support resolving live ETL/BI issues.

EDUCATION

B.Tech, Anna University (Jeppiaar SRR Engineering College) — 2020
HSC, State Board — 2016 | SSLC, State Board — 2014

CERTIFICATIONS

- Data Analyst - SSIS / SQL / Power BI, Udemy
- Advanced SQL, HackerRank
